DETAILED ACTION

1. This communication is in response to Applicant's appeal brief filed on December 20, 2005. Claims 1-8 and 18-24 are pending in this application.

Allowable Subject Matter

2. The following is a statement of reasons for the indication of allowable subject matter:

3. The prior art of record (Wilson US Patent 5,864,827 in combination with Cuomo et al US Patent 6,272,539 B1) teaches a method of displaying latency in a broker-dealer computer system, the system being engaged in automated processing of orders for securities including sending messages to markets and receiving from markets responses to messages, the method comprising: recording for messages sent to at least two different markets the time when each message is sent and the identity of the market to which each message is sent, the messages comprising orders; recording for responses received from said markets the time when each response is received, wherein each response corresponds to a particular message of said messages.

Even though, the prior art of record teaches the above mentioned steps, the prior art of record fails to teach a method of displaying latency in a broker-dealer computer system, the system being engaged in automated processing of orders for securities including sending messages to markets and receiving from markets responses to messages, including the steps of calculating for at least a first market a first latency dependent upon at least one recorded time when at least one message is sent to the first market and at least one recorded time when a corresponding response is received from the first market; calculating for a second market a second latency dependent upon at least one recorded time when at least one message is sent to the second market and at least one recorded time when a corresponding response is received

from the second market displaying on a device the identity of the first market and the latency for the first market and displaying the identity of the second market and the latency for the second market. For these reasons claim 1 is deemed to be allowable over the prior art of record, and claims 2-8 and 18-24 are allowed by dependency.

Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee, and to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled Comments on Statement of Reasons for allowance.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

(a) Fuji-Xerox (JP 07076155A) (March 20, 1995) Printer management device for image processors - uses main and printer processors to compute for processing time job ending time and latency of printing which are displayed in display units

(b) Dmitroca (US Patent 6,993,578 B1) (January 31, 2006) Method and System for Managing Performance Data About a Network

(c) Madhavapeddi et al (US Patent 6,975,656 B1) (December 13, 2005) Method and System for Accurately Calculating Latency Variation on an End-to-End Path in a Network

(d) Borzenko (US Patent 6,963,855 B1) (November 8, 2005) Apparatus and Method for Automated Display of Market Activity
